

1. Log into Facebook Live and click on the more options bubble (seen here as 3 dots).

2. Click on Live Video:

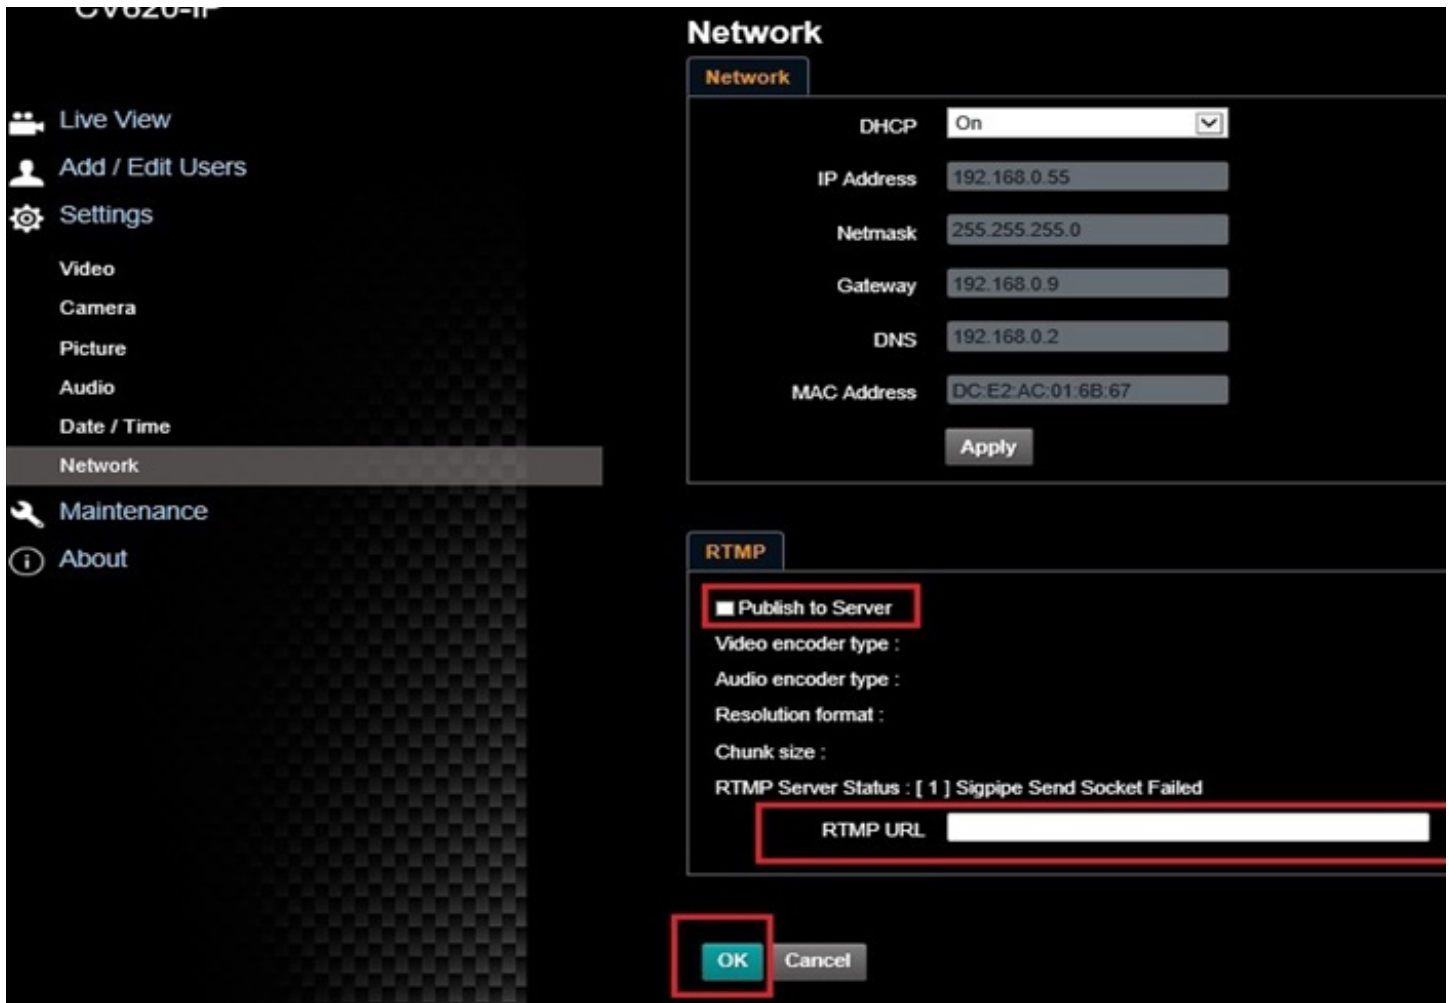

3. Click on Server URL "Copy": as seen in blue background window below and paste it into the CV620-IP's RTMP URL box as shown in step #4 black image:

Then, do the same with the Stream Key. Paste it into the blue image RTMP URL at the end of the Server URL you already pasted as an extension.

After you paste both the Facebook Server URL followed by the Facebook Stream Key into the camera's RTMP URL box contained in Software GUI, put a check in the camera's Publish to Server checkbox in the black image below in #4. Then reboot the camera by disconnecting power and then powering back up.

4. Here is the CV620IP Internet Explorer Network Tab:

5. Facebook Live will then show the Preview Image.

You can select the Facebook Schedule button to choose a time for the Live Broadcast or click on Go Live if you want to immediately start broadcasting. There is an End Live button if you want to stop the broadcast immediately.

Note: Each time you try to setup a camera for Facebook Live with a new Facebook URL and Facebook Stream Key, you must first remove those from the camera's network tab RTMP section, click OK and then reboot the camera's power. Then, do the steps above with a new generated Facebook RTMP URL and Facebook Stream Key.
